## INTRODUCTION

The data presented in this report were collected on the ninety-first consecutive cruise of the California Cooperative Oceanic Fisheries Investigations program. The R/V Horizon and R/V Orca of the Scripps Institution of Oceanography participated in this cruise.

The data are tabulated at observed depths; the interpolated and computed values are tabulated at standard depths and are accompanied by charts of horizontal distribution. The presentation of data in this report does not constitute publication; however, the data contained in this report have been carefully edited and no modifications should be necessary before final publication.

The stations occupied in the Gulf of California are based on a special grid; therefore, they appear following the data obtained in the standard station pattern. In each group stations are listed in numerical order. The designation "G" in the station number is used to denote Gulf of California stations.

## STANDARD PROCEDURES

Processing of the data was carried out using the method described by Klein.<sup>1/</sup> Certain approximations have been introduced for the determination of the integrated pressure terms which may result in errors whose maximum values are less than 0.5 dynamic centimeter at 0 over 200 decibars, 1.0 dynamic centimeter at 0 over 500 decibars, and 2.0 dynamic centimeters at 0 over 1000 decibars. The 125-meter level was introduced into the integration to obtain greater accuracy in the determination of  $\Delta D$ . The interpolated values at 125 meters are not tabulated.

To indicate degree of accuracy, temperatures are recorded in tenths of a degree when obtained by bucket thermometer, thermograph, or bathythermograph, while temperatures from reversing thermometers are recorded in hundredths of a degree. Extrapolated values and values interpolated between remote observations are entered within parentheses. A hyphen is used to indicate a missing observed value. The time is the time of messenger release. When more than one cast was made on a station, messenger times and wire angles are given in the order of increasing depth. A line is left blank between the observed data of each cast.

a) One salinity sample was missing from the first cast; it is not certain if it was the surface or 59-meter sample. Each value listed between 0 and 59 meters may actually belong to the preceding depth. The difference in  $\Delta D$  caused by such a displacement is negligible.

b) Overlapping casts; reconciliation of property curves when necessary.

- a) Salinity bottle numbers for the two upper casts (0-107 m and 121-1001 m) were not recorded on the data sheet. Since standard handling and titrating procedures were used, these salinity values are assumed to be in correct order. The surface value has been omitted because the sample bottle was not capped.
