PHYSICAL AND CHEMICAL DATA

CCOFI Cruise 6201-2  
12 January - 19 February 1962

SIO Reference 62-26  
19 November 1962

ERRATA

PHYSICAL AND CHEMICAL DATA REPORTS

1. CCOFI Cruise 5904 (SIO Reference 60-37)

Page 172, Station 137.80:

Station occupied in April, not March.

Page 174, Station 140.50 (2217 GCT) and 140.60:

Stations occupied in April, not March.

Page 175, footnote:

The wording of the footnote and the listing of numerical values have been changed to read:

- a) The first four salinity values were assumed to be listed ~~our~~ of order.  
They were originally listed according to increasing depth as follows:  
34.33, 34.05, 34.16 and 34.04%.

2. CCOFI Cruise 5912 (SIO Reference 61-21)

Page 471, Station 93.90:

Temperature at 20 meters should read 16.93.

3. CCOFI Cruise 6005 (SIO Reference 62-7)

Page 232, Station 90.100:

Latitude should read 31°01'N (not 30°01'N).

4. CCOFI Cruise 6103/6104-5/6105 (SIO Reference 62-15)

Page 68, Station 90.32:

Longitude should read 118°03.5'W (not 178°03.5'W).

Page 75, Station 94<sup>6</sup>.29<sup>7</sup>:

A degree sign should follow the wire angle: 03°.

## CONTENTS

List of Figures . . . . .	ii
Introduction . . . . .	iii
Personnel . . . . .	vii
Tabulated Data . . . . .	1
Distribution List . . . . .	51

## FIGURES

1. CCOFI Cruise 6201-2, station positions
2. Horizontal distribution of dynamic height anomaly (0 over 500 d-bar)
3. Horizontal distribution of temperature at 10 meters
4. Horizontal distribution of salinity at 10 meters
5. Horizontal distribution of temperature at 200 meters
6. Horizontal distribution of salinity at 200 meters

## INTRODUCTION

The data presented in this report were collected by the RV Black Douglas of the Bureau of Commercial Fisheries and the RV Horizon of the Scripps Institution of Oceanography on Cruise 6201-2 of the California Cooperative Oceanic Fisheries Investigations program. The first two figures in this cruise numbering system represent the year of the cruise; the last two figures, the month. In the case of quarterly cruises the last figures are hyphenated. The cruises preceding this one in the series are 6101-2 (Scripps Institution report, SIO Ref. 61-24), 6103/6104-5/6105 (SIO Ref. 62-15), 6107-8/6108 (SIO Ref. 62-16), 6109/6110-11 (SIO Ref. 62-17) and issued out of sequence 6207-8 (SIO Ref. 62-23).

The data are tabulated at observed depths; the interpolated and computed values are tabulated at standard depths and are accompanied by charts of horizontal distribution. The presentation of data in this report does not constitute publication; however, the data contained in this report have been carefully edited and no modifications should be necessary before final publication.

## STANDARD PROCEDURES

Processing of the data was carried out using the method described by Klein.<sup>1/</sup> Certain approximations have been introduced for the determination of the integrated pressure terms which may result in errors whose maximum values are less than 0.5 dynamic centimeter at 0 over 200 decibars, 1.0 dynamic centimeter at 0 over 500 decibars, and 2.0 dynamic centimeters at 0 over 1000 decibars. The 125-meter level was introduced into the integration to obtain greater accuracy in the determination of  $\Delta D$ .

To indicate degree of accuracy, temperatures are recorded in tenths of a degree when obtained by bucket thermometer, thermograph, or bathythermograph, while temperatures from reversing thermometers are recorded in hundredths of a degree. The salinity values obtained by salinometer are recorded to three decimal places, provided they meet accepted standards. The third decimal place has been offset to emphasize that the accuracy of the observations is not to one unit in that place, but that the values recorded "have a reproducibility of  $\pm 0.004\%$  salinity at the 95 percent probability level, and a probable accuracy of  $\pm 0.01\%$  salinity or better at the same level of probability."<sup>2/</sup> The values are recorded to two decimal places when obtained by chlorinity titration, or by salinometer where only one determination

<sup>1/</sup>Klein, Hans T. A new technique for processing physical oceanographic data. MS.

<sup>2/</sup>Quotation from Department of Oceanography, University of Washington, Tech. Rep. No. 66, UW Ref. 60-18, October 1960.

per sample was obtained, or where there is doubt concerning the accuracy of a particular sample, or of all samples on a station. The accuracy of all samples obtained by salinometer and recorded to two decimal places is believed to be equal to or better than those obtained by manual titration.

Extrapolated values and values interpolated between remote observations are entered within parentheses. A hyphen is used to indicate a missing observed value. The time is the time of messenger release. When more than one cast was made on a station, messenger times and wire angles are given in the order of increasing depth. A line is left blank between the observed data of each cast.

On stations where more than one cast is lowered, the various property curves may not agree perfectly. This discrepancy may be caused by changes in geographical position, real property changes with time, slight error in measurement, or a combination of these factors. Stations with overlapping casts have the following footnote: Overlapping casts; reconciliation of property curves when necessary.

#### FOOTNOTES

Laboratory personnel, before titrating the salinity samples, note any possible imperfections in the sealing of the bottles as follows:

Loose bottle cap:

The cap is definitely loose so that it could be moved with very little applied pressure. The salinity values obtained from these samples may be usable depending on time and/or conditions of storage.

Possible evaporation:

Either the cap was sealed with less than usual pressure, the bottle edge chipped, the rubber washer cracked, or the bale broke on opening, etc.

Use of the above values in interpolation depends upon consistency with other values of salinity and other properties, and these footnotes are supplemented with "falls on property curve" or "does not fall on property curve," depending upon whether the property curve was drawn through the value or not.

In addition to footnotes, three special notations are used without footnotes because their meaning is always the same.

To indicate a premature or a delayed reversal of the water-sampling device which results in certain depth and property errors, the following notation is used.

p: pretrip or posttrip.

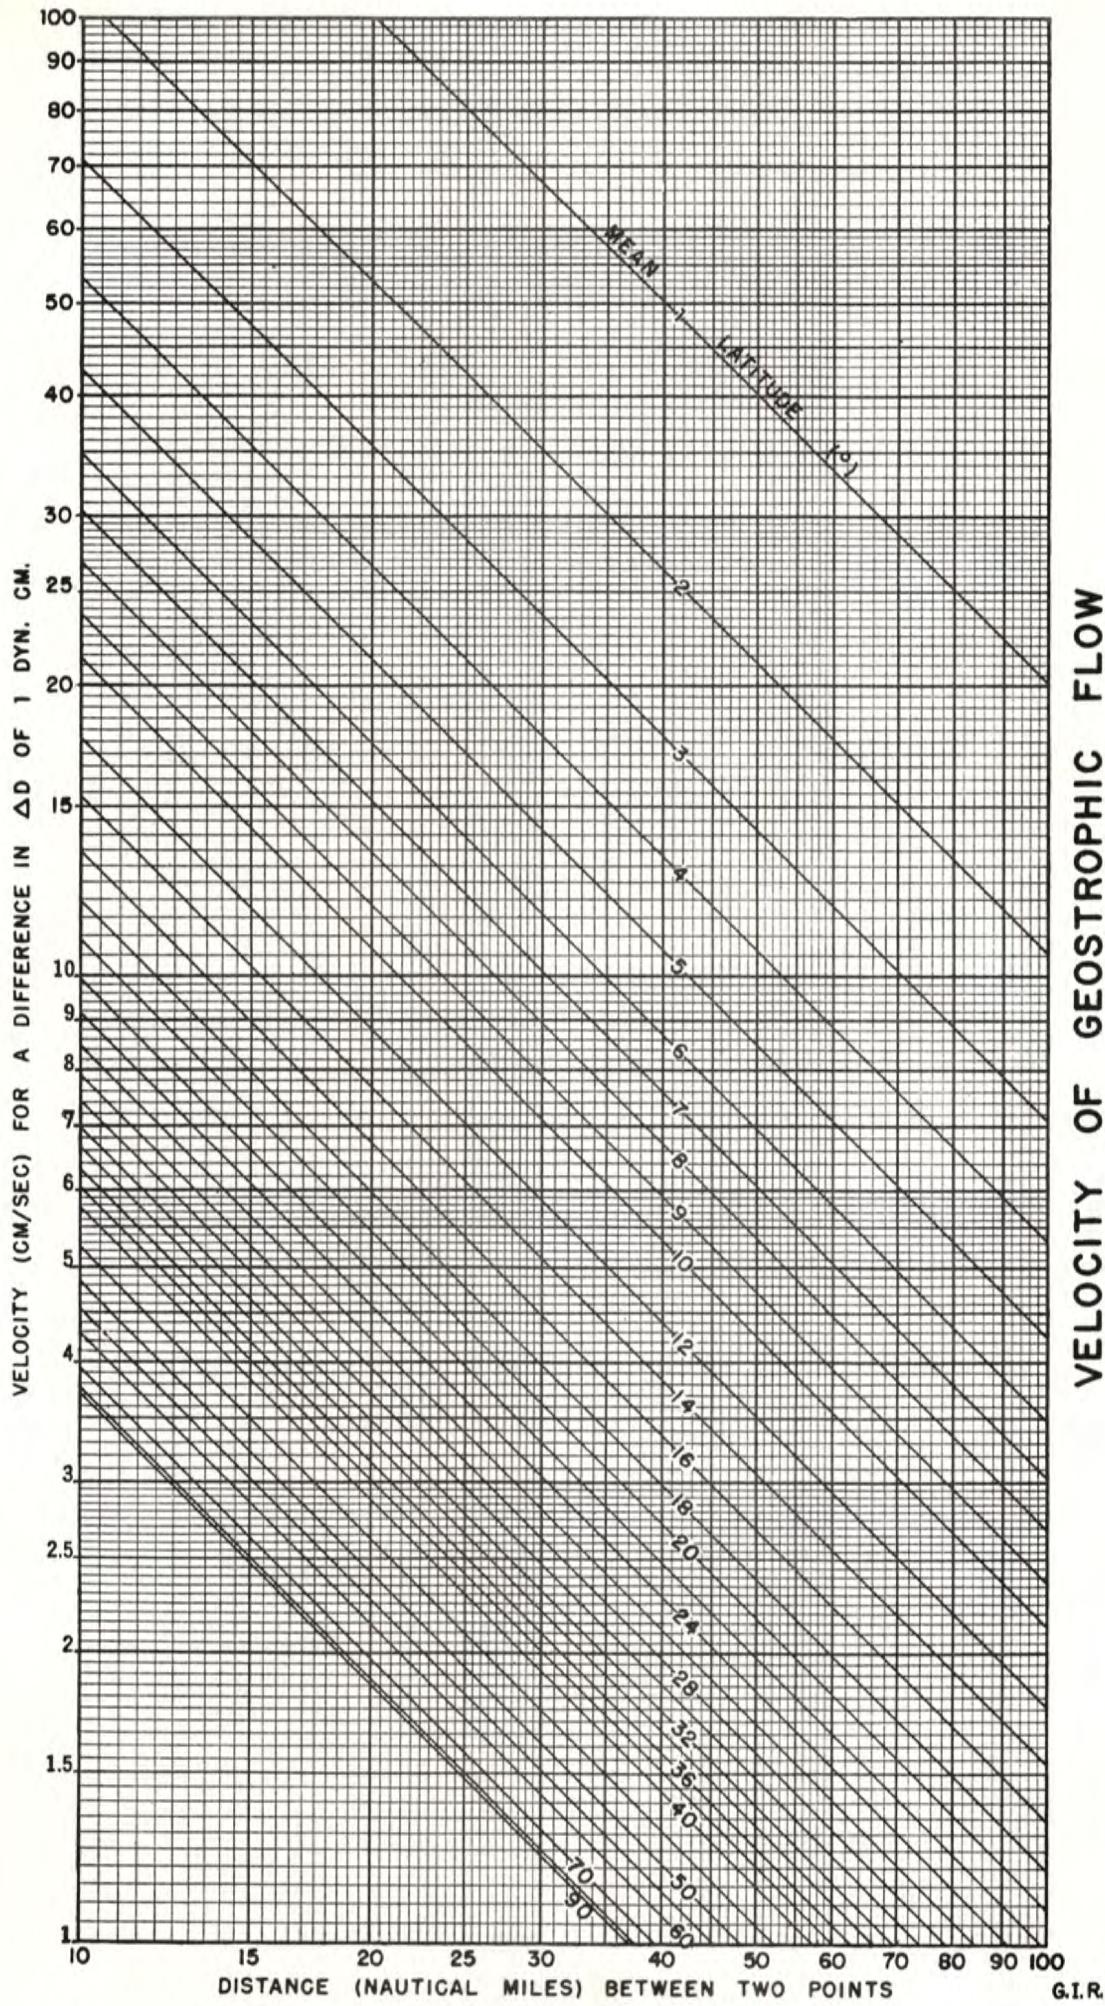

Values which are not drawn through because they seem to be in error without apparent reason are indicated by one of the following notations.

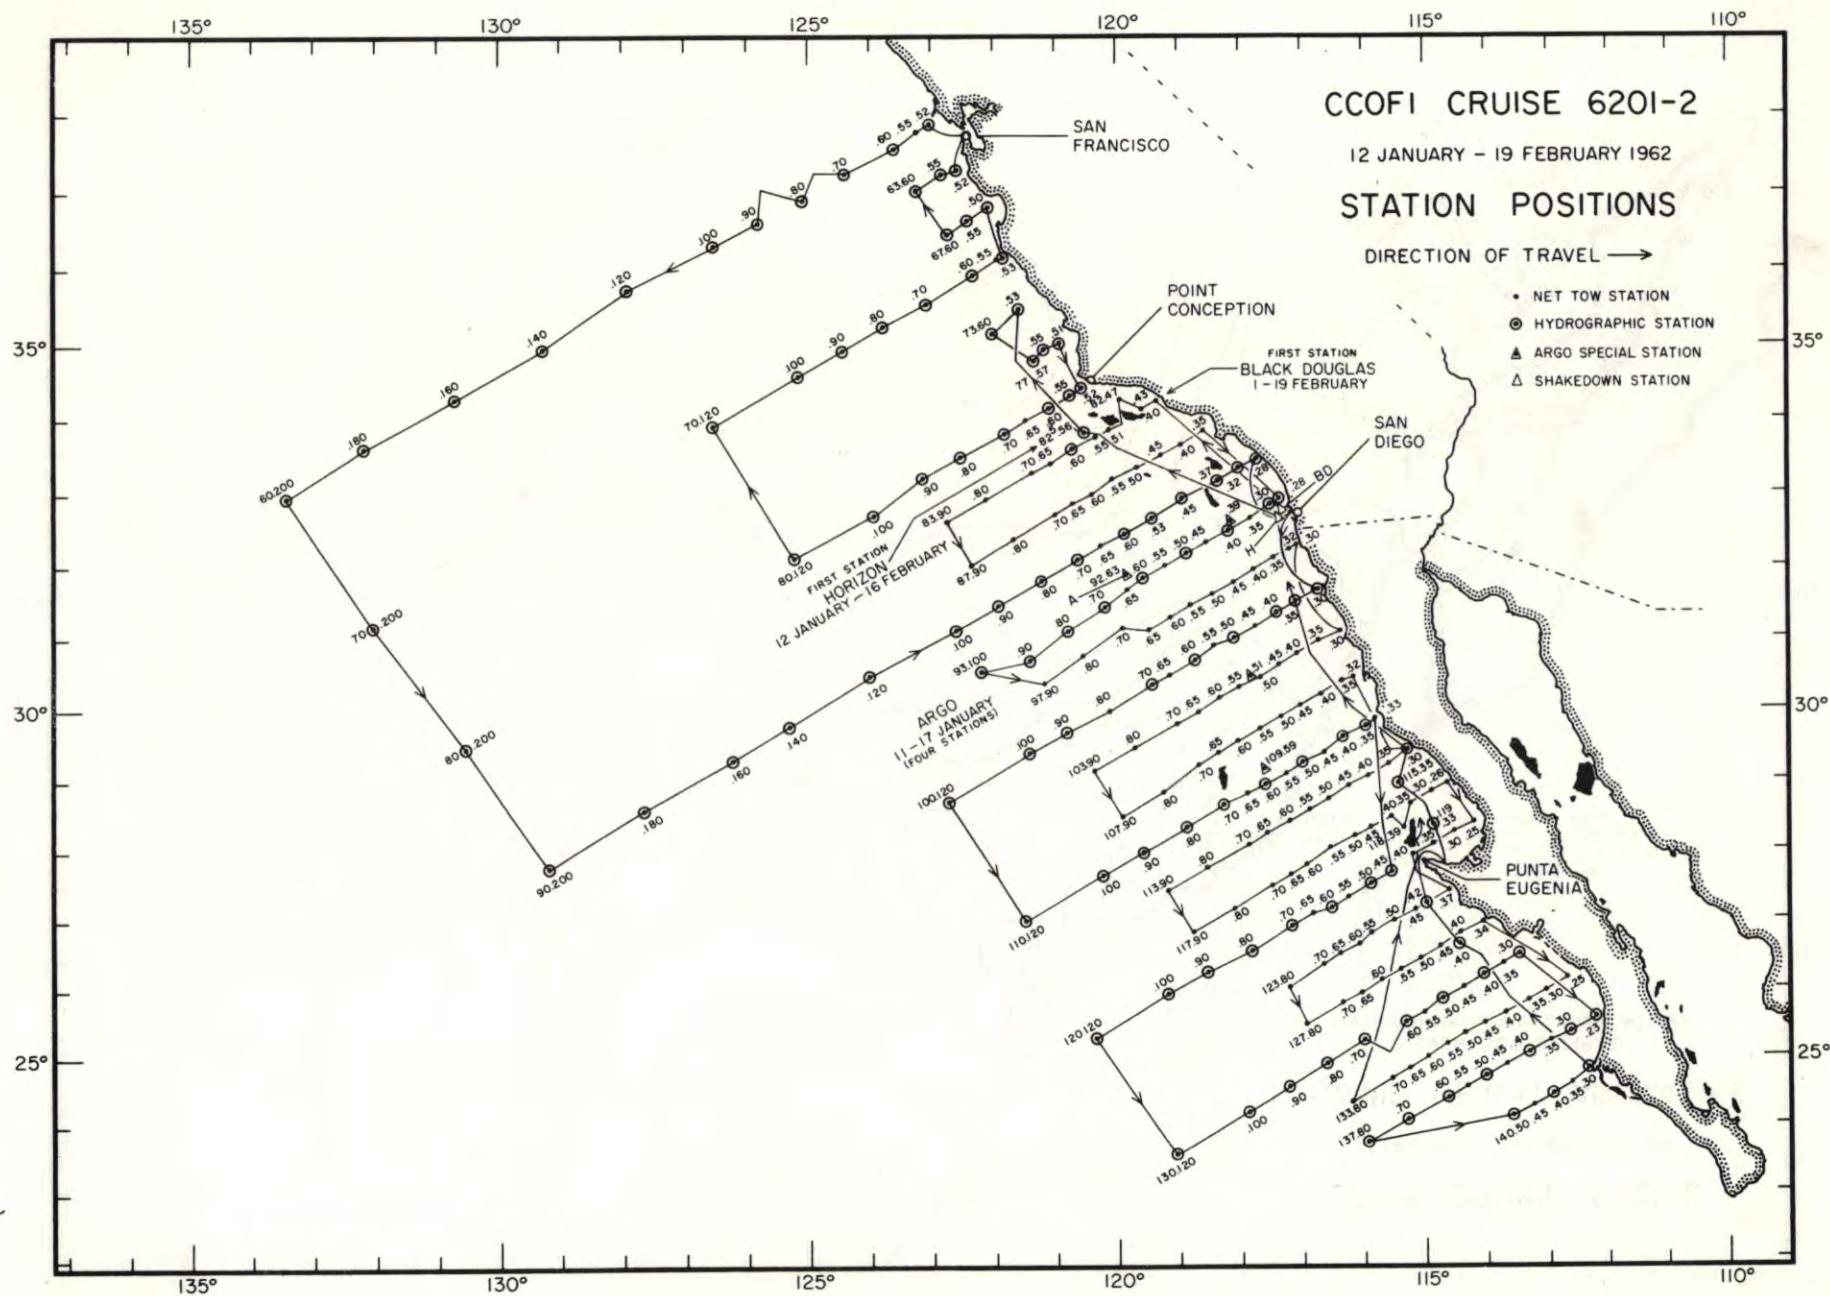

r: rejected value (value seems to be definitely wrong),

u: uncertain value (value may be correct; occasionally it can influence the drawing of the property curve).

#### FORMAT

These data are typed in the format of the University of California Press publication, Oceanic Observations of the Pacific.

a) Four hydrographic stations were occupied by RV Argo as part of a series of nine stations whose primary purpose was the collection of water samples by means of a 10,000-gallon sampler for Silicon-32 determination. In addition, two vertical profiles (S-4 and S-8) were made with a newly designed 25-gallon water sampler for lead isotope determination, including one sample 70 meters off the bottom in 3,600 meters of water. A series of shallow lead isotope profiles were made on Stations S-1, S-2, S-3 and S-7. Fifty-gallon Carbon-14 samples were taken on Stations S-3 and S-8. On all four hydrographic stations silicon concentration was determined from water samples collected by standard Nansen bottles. Thirteen 20-liter samples were collected for Lead-210 determination.

b) Overlapping casts; reconciliation of property curves when necessary.  
c) Alternate value, 2.06 ml/L, not used in interpolation.
