

Conductivity Calibration Report

Customer:	Oregon State University				
Job Number:	55397	Date of Report:	7/31/2009		
Model Number:	SBE 04-02/0	Serial Number:	041030		

Conductivity sensors are normally calibrated 'as received', without cleaning or adjustments, allowing a determination of sensor drift. If the calibration identifies a problem or indicates cell cleaning is necessary, then a second calibration is performed after work is completed. The 'as received' calibration is not performed if the sensor is damaged or non-functional, or by customer request.

An 'as received' calibration certificate is provided, listing the coefficients used to convert sensor frequency to conductivity. Users must choose whether the 'as received' calibration or the previous calibration better represents the sensor condition during deployment. In SEASOFT enter the chosen coefficients using the program SEACON. The coefficient 'slope' allows small corrections for drift between calibrations (consult the SEASOFT manual). Calibration coefficients obtained after a repair or cleaning apply only to subsequent data.

'AS RECEIVED CALIBRATION'	$\checkmark Performed \qquad \Box Not Performed$			
Date: 7/31/2009	Drift since last cal:	-0.0	0070	PSU/month*
Comments:				

'CALIBRATION A	FTER CLEANING & REPLATINIZING'	Performed	Not Performed
Date:	Drift since I	Last cal:	PSU/month*

Comments:

*Measured at 3.0 S/m

Cell cleaning and electrode replatinizing tend to 'reset' the conductivity sensor to its original condition. Lack of drift in post-cleaning-calibration indicates geometric stability of the cell and electrical stability of the sensor circuit.
