## **Conductivity Calibration Report**

Model Number   77174   Serial Number:   3/4/2014
Conductivity sensors are normally calibrated 'as received', without cleaning or adjustments, allowing a determination of sensor drift. If the calibration identifies a problem or indicates cell cleaning is necessary, then a second calibration is performed after work is completed. The 'as received' calibration is not performed if the sensor is damaged or nonfunctional, or by customer request.  An 'as received' calibration certificate is provided, listing the coefficients used to convert sensor frequency to conductivity. Users must choose whether the 'as received' calibration or the previous calibration better represents the sensor condition during deployment. In SEASOFT enter the chosen coefficients. The coefficient 'slope' allows small

repair or cleaning apply only to subsequent data.
'AS RECEIVED CALIBRATION'   ✓ Performed   Not Performed
Date: 2/13/2014 Drift since last cal: -0.00160 PSU/month
Comments:
'CALIBRATION AFTER CLEANING & REPLATINIZING'   Performed   Not Performed
Date: 3/4/2014 Drift since 20 Nov 12 +0.00060 PSU/month
Comments:

\*Measured at 3.0 S/m

Cell cleaning and electrode replatinizing tend to 'reset' the conductivity sensor to its original condition. Lack of drift in post-cleaning-calibration indicates geometric stability of the cell and electrical stability of the sensor circuit.
